## Cookies And Privacy Policy

### **First, a brief explanation of what a cookie is.**

Put simply, a cookie is a small text file which is stored on your computer or other web enabled device so that the website can remember some information about your browsing activity on the website.

A cookie can be used to hold information relating to your use of a website, some examples are:

- information about your device such as it's IP address and browser type,
- demographic data,
- the URL a link that opened the website you are visiting,
- your online preferences.

The simplicity of such a small text file means that cookies can have many uses and are sometimes essential for the proper functioning of a website; this is often the case with online shops and other interactive websites.
